

## PRODUCT TECHNICAL DATA SHEET

# ES-1043 Casting Type Polyester

## **DESCRIPTION AND BASIC PROPERTIES**

ES-1043 ISO/NPG Based, methyl methacrylate modified unsaturated polyester resin. Low-middle reactivity, high viscosity and flexible. It is used as engineering stone application also can be used as a general purpose casting polyester. It has light colour and extremely shiny products. Its resistance to exterior conditions is high. Due to its low volumetric shrinkage, it has no deformation in end product.

### **STORAGE CONDITIONS**

It should be stored in a dry, clean and cool place (15-25 ° C) in closed packages. The shelf life of the product is valid for this temperature range and it should not be forgotten that it will shorten at high temperatures. Products with the same charge number and date must be stored together.

Another factor that affects the life of unsaturated polyester resins containing styrene is sunlight. Styrene must be polymerized in the sunlight and products that are considered to shorten the life of the product should be avoided from direct sunlight contact.
